ABSTRACT

In recent years, the interest in word combinations and, in particular, in Light Verb Constructions (LVCs), has led many scholars to investigate this phenomenon, focusing on the different types of constructions and their characteristics. To this end, several tests have been developed over the years to identify LVCs (among them Marini, 2000; Langer, 2004; Ježek, 2004; Pompei, 2017).

In this paper we will present the tests that have been developed up to now and we apply some of them to Latin LVCs.
